Introduction

Senior Platform Engineer with 5 years of experience designing, building and operating cloud platforms across Azure and AWS. Experienced in supporting enterprise platforms serving 250+ services and leading the development of internal developer platforms that standardise infrastructure, CI/CD and developer workflows. Strong focus on platform architecture, infrastructure as code, automation and developer enablement, with experience providing technical leadership across engineering teams.

Application Insights

Professional Experience

October 2025 - Present

DevOps Engineer @ Datapharm

- Owned design and rollout of Datapharm's first internal developer platform (golden path), standardising CI/CD and Terraform patterns across Container Apps workloads.
- Led the migration of a key services from Azure DevOps to GitHub Actions, standardising CI/CD workflows, improving automation, and reducing operational overhead.
- Defined and rolled out new naming and tagging conventions to improve governance and cost allocation.
- Contributed to a data environment refresh project: extracted, sanitised, and loaded production-like data into non-production environments to improve testing fidelity.
- Instrumented .NET containers with native OpenTelemetry and deployed an OpenTelemetry Collector on Container App environment to stream telemetry to Application Insights.
- Leveraged AI-assisted coding tools (GitHub Copilot and Claude) to accelerate implementation, improve code quality, and increase delivery efficiency.

August 2023 – October 2025

Azure DevOps Engineer @ BAE Systems Digital Intelligence

- Acted as technical lead and escalation point across two concurrent projects: mentoring and leading a five-person team, providing technical leadership and communication between team and delivery/account managers.
- Selected for the BAE Systems High Potential programme for performance and leadership potential.
- Supported a platform hosting 250+ services, providing operational and delivery support.
- Defined and prioritised a backlog of user stories to deliver platform features and reliability improvements.
- Designed and rolled out an Application Insights consolidation strategy, moving from a single instance to workload/product-level insight groups to improve observability and cost control.

October 2021 - August 2023

Site Reliability Engineer @ MMT Digital

- Completed an intensive 8-week bootcamp covering Azure DevOps, Azure, Kubernetes, Docker, and related platform tooling.
- Supported Kubernetes clusters running ~8 services: implemented cert-manager / Let's Encrypt automated certificate renewals, applied numerous security fixes, and configured Horizontal Pod Autoscaling (HPA).
- AWS/Terraform refactor to deliver a production-ready Kubernetes platform for 50+ services, improving reliability and infrastructure consistency across environments.

Credentials

- Azure Solutions Architect Expert (AZ-305)
- Azure Administrator Associate (AZ-104)
- Azure Fundamentals (AZ-900)
- Azure Data Fundamentals (DP-900)

Projects

Daylog - Nursery Management System

A nursery management system MVP, where a user can enter fields relating to a child's day at nursery and an admin dashboard where staff can add/edit/remove classrooms, staff and children: <https://github.com/calumrees99/daylog>

Microservice

Event-Driven Architecture

Golang

PostgreSQL

React

ChocoJump

Developed a simple 2D platformer game using Golang and the Ebiten game engine. <https://github.com/calumrees99/chocojump>

Golang

game development

Terraform Modules

Developed reusable Terraform modules to standardize infrastructure provisioning and improve deployment consistency across multiple projects. <https://github.com/calumrees99/terraform-modules>
