Email	 calumrees99@gmail.com

Introduction

Platform Engineer with 5+ years of experience designing and operating cloud platforms in Azure, specialising in infrastructure as code, platform reliability, and developer enablement. Experienced in building and evolving enterprise-scale platforms supporting hundreds of services, with a focus on standardisation, automation, and operational excellence. I work closely with engineering teams to reduce cognitive load, improve deployment velocity, and increase system reliability through well-designed platform capabilities and tooling. My work centres on creating scalable, self-service platforms through reusable infrastructure, CI/CD standardisation, observability, and resilient architecture design.

Professional Experience

October 2025 - Present

DevOps Engineer @ Datapharm

- Defined and rolled out new naming and tagging conventions to improve governance and cost allocation.
- Contributed to a data environment refresh project: extracted, sanitised, and loaded production-like data into non-production environments to improve testing fidelity.
- Built Datapharm's first-generation "golden path": templated, extensible CI/CD pipelines and Terraform module patterns for Container Apps to enable self-service.
- Instrumented .NET containers with native OpenTelemetry and deployed an OpenTelemetry Collector on Container App environment to stream telemetry to Application Insights.
- Leveraged AI-assisted coding tools (GitHub Copilot and Claude) to accelerate implementation, improve code quality, and increase delivery efficiency.

August 2023 – October 2025

Azure DevOps Engineer @ BAE Systems Digital Intelligence

- Acted as technical lead and escalation point across two concurrent projects: mentored an apprentice who became the primary project contact, and I later led a six-person team, providing technical leadership and communication between team and delivery/account managers.
- Selected for the BAE Systems High Potential programme for performance and leadership potential.
- Supported a platform hosting 250+ services, providing operational and delivery support.
- Defined and prioritised a backlog of user stories to deliver platform features and reliability improvements.
- Migrated a critical service to an Azure DevOps YAML CI/CD pipeline; authored and executed a phased migration plan to minimise sprint impact.
- Designed and rolled out an Application Insights consolidation strategy, moving from a single instance to workload/product-level insight groups to improve observability and cost control.

October 2021 - August 2023

Site Reliability Engineer @ MMT Digital

- Completed an intensive 8-week bootcamp covering Azure DevOps, Azure, Kubernetes, Docker, and related platform tooling.
- Supported Kubernetes clusters running ~8 services: implemented cert-manager / Let's Encrypt automated certificate renewals, applied numerous security fixes, and configured Horizontal Pod Autoscaling (HPA).
- Led an AWS/Terraform refactor to deliver a production-ready Kubernetes platform, improving reliability and infrastructure consistency across environments.

Credentials

- Azure Solutions Architect Expert (AZ-305)
- Azure Administrator Associate (AZ-104)
- Azure Fundamentals (AZ-900)
- Azure Data Fundamentals (DP-900)

Projects

Daylog - Nursery Management System

A nursery management system MVP, where a user can enter fields relating to a child's day at nursery and an admin dashboard where staff can add/edit/remove classrooms, staff and children: <https://github.com/calumrees99/daylog>

Microservice Event-Driven Architecture Golang PostgreSQL React

ChocoJump

Developed a simple 2D platformer game using Golang and the Ebiten game engine. <https://github.com/calumrees99/chocojump>

Golang game development

Terraform Modules

Developed reusable Terraform modules to standardize infrastructure provisioning and improve deployment consistency across multiple projects. <https://github.com/calumrees99/terraform-modules>
